

## Instalação do Heroku

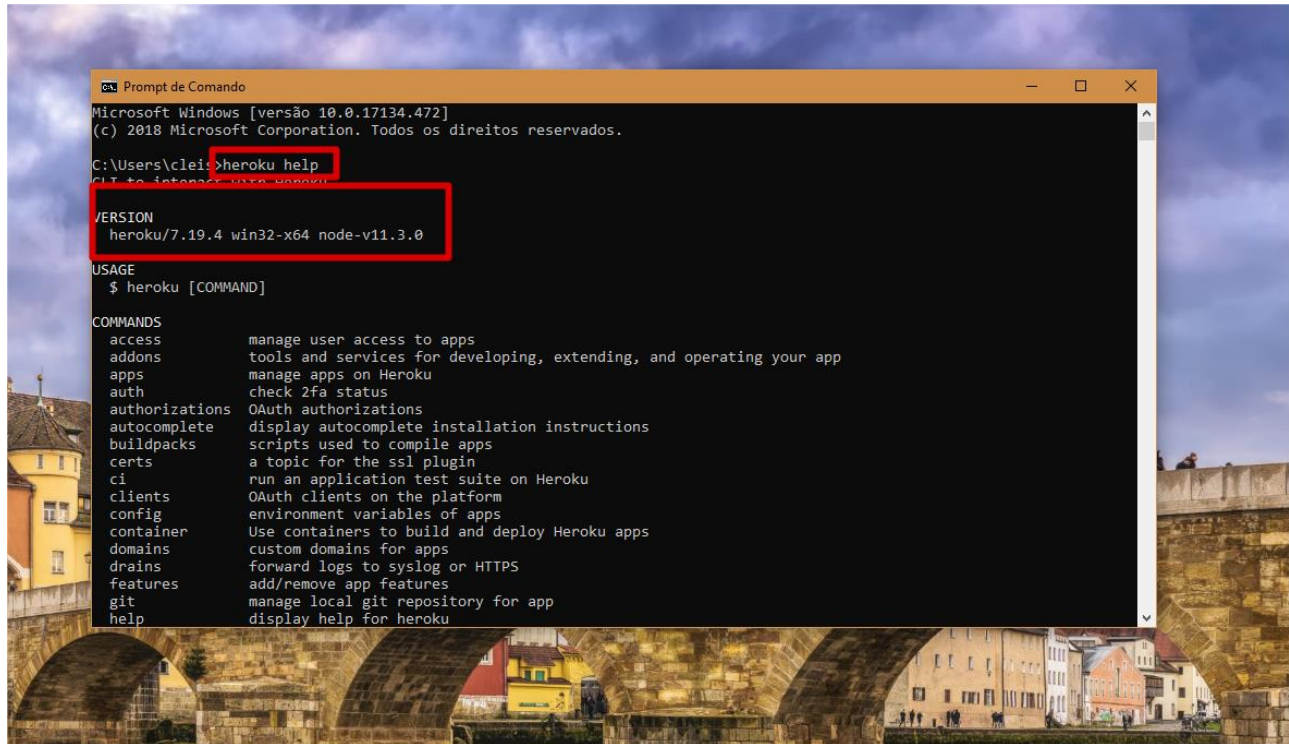

Vamos usar o Heroku como cloud para fazermos deploy das nossas APIs, abaixo está o processo de instalação, passo a passo.

Após fazer download do Heroku CLI, usando o link que foi colocado no recurso da aula de dicas gerais, basta clicar no executável.

Para testarmos se o Heroku foi instalado corretamente, abra o prompt de comando e execute o comando “*heroku help*”, conforme imagem abaixo.

```
Prompt de Comando
Microsoft Windows [versão 10.0.17134.472]
